

JEWELRY AND TIMEPIECE DEVICE

ABSTRACT

A Jewelry and timepiece protection and storage device which provides selective added decorative and/or non-decorative functional enhancements to horological and non-horological jewelry items having band, chain, strap, lanyard or similar holding entity and which when such jewelry items are worn they at least in part surround a body part such as the wrist, arm, ankle, neck, head, waist. The enhancements are electronic or mechanical. Decorative functional enhancements may be non-electronic and/or electronic visual display capabilities allowing selective viewing of selective interchangeable pictures, photos, artwork replicas and other graphic material. Changeability of the jewelry piece apparent shape and/or size is possible, and there can be a light emitting device. Non-decorative functional enhancements may include selective protective covering, physical and/or electronic storage capabilities for information or personal identification, medical alert or non medical documents, physical paraphernalia, instruments, tools, batteries, non-electronic, electronic and computer devices, global positioning and tracking devices, record keeping devices or communication devices. The invention further is constructed to permit the device to allow easy and ready selective at least visual access to a selective portion of the jewelry item being enhanced.
